

RESIN COMPOSITIONS WITH FLUOROPOLYMER,  
FILLER COMBINATIONS

ABSTRACT OF THE DISCLOSURE

[0041] A thermoplastic resin composition is disclosed which comprises a matrix polymer, and a combination of a fluoropolymer that can be at least partially encapsulated by an encapsulating polymer, and a filler. Methods for making the thermoplastic resin composition and articles made of such compositions are also disclosed. The composition and article can have improved tensile modulus, ductility and impact properties.
